## **INTRODUCTION**

This report is written to address proposed changes to the abandonment plans for Slurry Impoundment No. 7 at Warrior Met Coal Mining, LLC Mine No. 4 Mine, P-3260. Slurry Impoundment No. 7 has been covered with a minimum of four (4) feet of the best available non-toxic, non-combustible and non-acid forming soil.

## **MODIFICATION**

The modification to the abandonment plan proposes to leave twelve (12) acres of depression areas within the slurry impoundment as Seasonal Scrub/Shrub Wetlands. See Seasonal Scrub/Shrub Wetland Design Plan attached in the Fish and Wildlife Enhancement and Protection Plan. The existing emergency spillway channel will remain to control runoff during rainfall events. See attached [Slurry Impoundment No. 7 Abandonment Plan Map](#) for locations and depths of cover material.

An existing dewatering pipe located in the northwestern dam of the slurry impoundment will be partially removed and will then be capped with concrete. See attached [Slurry Impoundment No. 7 Abandonment Plan Map](#) for location of the pipe and [Dewatering Pipe Sealing Typical Cross-Section](#).
