

Applicant: Riverview Development, LLC.  
Mine Name: Riverview Mine 40 - Acre Tract  
Permit Number: P-

Part IV - Reclamation Plan

A. Post-mining Land Use

1. Describe the proposed post-mining land use(s) for the permit area. If more than one land use is proposed, show on a map and give acreage for each use. Include comments from the legal owner of record concerning the proposed land use. (780.23, 816.133)

32 acres permanent water impoundment, fish & wildlife habitat

14 acres undeveloped or no current use

2. Is the proposed land use different from the current land use? (780.23, 816.133) (XXX)Yes ( ) No

If yes, complete the following:

- (a) Is the area zoned for the proposed land use?  
( ) Yes ( ) No (XXX) N/A
- (b) Is the proposed use compatible with adjacent land uses and applicable local and state land use policies?  
(XXX) Yes ( ) No
- (c) Explain the feasibility of the proposed land use as related to land use trends, and explain how the land use will be developed, achieved, and sustained.
- (d) Include letters of commitment from outside parties ensuring the provision of any necessary public facilities and any state and local governmental agencies which have to initiate, implement, approve or authorize the proposed land use.
- (e) Enclose design plans for the proposed post-mining land use, if applicable.

Applicant: <u>Riverview Development, LLC.</u>
Mine Name: <u>Riverview Mine 40 - Acre Tract</u>
Permit Number: <u>P-</u>

B. Grading and Contouring

1. Enclose detailed plans with appropriate cross-sections or maps which satisfy the requirements of Section 780.18(b) (3 and 4).

See the Attachment IV-B.-1. and Attachment IV-B.-3.  
Terraces will be constructed a maximum of 100 feet apart on slopes to minimize erosion. Terraces will not be excessive in width or have greater than 50% outer slopes.

2. Complete the following timetable: [780.18(b) (1)]

Increment (if applicable)	# Months After Operation Begins	% Of Increment of Permit Which Will
------------------------------	------------------------------------	--

Be Graded and Contoured

1	1 months	0%
	3 months	25%
	6 months	50%
	9 months	75%
	12 months	100%
2	12 months	0%
	15 months	25%
	18 months	50%
	21 months	75%
	24 months	100%

\*\* Grading will be kept to within 6 months or four spoil ridges from the active pit. The ungraded disturbance is to be limited by a permit condition as agreed upon by Riverview Development, LLC and the ASMC. 180 days following removal of all coal from a given increment, the increment will be backfilled and graded.

Applicant: Riverview Development, LLC.  
Mine Name: Riverview Mine 40 - Acre Tract  
Permit Number: P-

3. On appropriate map(s), show representative values for the following: [780.18(b)(3), 816.102]
- (a) Percent of slope before mining; and
  - (b) Proposed post-mining slope including final slope of the highwall(s) in percent.

Land slope measurements on the permit map indicate an average premining slope of 9%. The final average post-mining slope will not exceed the pre-mining slope. Final highwall slopes will not exceed the steepest premining slope, 15%. Please note that the term pre-mining as used above addresses the state of the land prior to any mining having occurred, whether conducted by Riverview Development, LLC, or others.

Applicant: Riverview Development, LLC.  
Mine Name: Riverview Mine 40 - Acre Tract  
Permit Number: P-

Attachment IV-B-1

#### OVERBURDEN RESTABILIZATION PLAN

All overburden shall be backfilled, compacted, and graded so that the post mining slope will approximate the pre-mining slope and in a timely manner. (See Part IV.-B.-2). Overburden will be rough graded by dozers. Once overburden has been rough graded, farm-type tractors will be used to disc the overburden to its final contour, decrease compaction, and increase the mechanical breakage of the surface layer.

Grading and contouring will proceed as part of the mining sequence. Spoil will be graded up to 180 days or four spoil ridges from the active pit. Mobile equipment will be used for grading at this site. Spoil peaks will be graded and depressions filled. Excess spoil from this process will be placed in the final pit and backfilled against the final highwall. The remaining highwall will be drilled and blasted into the final pit. This material will be graded and contoured to conform to the approximate original contour of the permit area. Final average post mining slopes will not exceed the maximum premining slope.

Stabilization of graded material will be achieved by the planting of warm or cool season perennials as outlined in Part IV-C-5 of the permit.

C. Revegetation

- (1) Outline procedures for soil testing required to determine type and amount of soil amendments to be applied and to evaluate results of topsoil handling and replacement. (780.18, 816.25)

Once the texture criteria for final graded overburden has been met as outlined on Attachment IV-C-2, the final texture samples taken shall be sent to a qualified soil testing laboratory where the following tests shall be conducted: pH, fertility ratings for phosphorus, potassium, and magnesium, and amendment recommendations for post mining revegetation for limestone, nitrogen, P<sub>2</sub>O<sub>5</sub> and K<sub>2</sub>O. Results of this analysis will be used to determine the amount of soil amendments, if any, to be applied to the plant medium and will be submitted to the Regulatory Authority for review.

- (2) Are selected overburden materials to be used as a supplement or substitute for topsoil?  
(XXX) Yes ( ) No

If, yes, provide results of analysis, trials, and tests required under Section 816.22(e). (779.21)

**NOTE:** The area to mined has been previously disturbed. There is no topsoil present at this site. The permit area will be reclaimed by covering the area with the best available non-acid, non-toxic and non-combustible cover material onsite. See Attachment II-E for the analysis of spoil samples and the Mine Site Location Map for the location of the sample site.

- (3) Are commercial or introduced species to be used?  
( ) Yes (XXX) No

If yes, give a narrative with supporting references which show that the species meet the requirements of Section 816.112. (780.18, 816.112)

- (4) Is the area to be reclaimed for fish and wildlife habitat?  
(XXX) Yes ( ) No

If yes, list the species of plants to be used with a brief description of how they meet the criteria of Section 816.97 (d) (6). [780.18(b) (5 and 6), 816.97(d) (6)]

Basin 002P is to remain as a permanent water impoundment, fish and wildlife habitat

- (5) Complete the following schedules for each increment or sub-area of the permit area. [780.18(b) (5)]

Applicant: <u>Riverview Development, LLC.</u>
Mine Name: <u>Riverview Mine 40 - Acre Tract</u>
Permit Number: <u>P-</u>

VEGETATION SCHEDULE

Increment 1-2

Temporary Vegetation

<u>Planting Species</u>	<u>Planting Rate</u>	<u>Planting Methods</u>	<u>Dates</u>	<u>Areas to be Planted</u>
Rye Grass	10#/acre	Broadcast	Fall	All Disturbance
Browntop Millet	10#/acre	Broadcast	Spring	All Disturbance

Permanent Vegetation

<u>Planting Species</u>	<u>Planting Rate</u>	<u>Planting Methods</u>	<u>Dates</u>	<u>Areas to be planted</u>
Bermuda	10#/Acre	Broadcast	Spring	All Disturbance
Fescue	50#/Acre	Broadcast	Both	All Disturbance
Kobe	30#/Acre	Broadcast	Spring	All Disturbance
Lespedeza				
Vetch	30#/Acre	Broadcast	Fall	All Disturbance

Note: Planting will take place the 1st planting season after grading occurs.

Applicant: Riverview Development, LLC.  
Mine Name: Riverview Mine 40 - Acre Tract  
Permit Number: P-

6. Describe, in detail, proposed husbandry practices to be used. [780.18(b)(5), 805.13(b)(3)]

In cases where rills and gullies form that exceed performance standards, these areas will be regraded and reseeded. Areas where adequate vegetative cover is not established will be reseeded accordingly using those planting techniques described earlier in response to question IV-C.-5.

7. Describe, in detail, the measures and sampling methods to be used to determine and demonstrate success of revegetation; or methods to demonstrate the productive capacity of reconstructed prime farmland. (780.18, 816.116)

Productivity and revegetation success will be determined in accordance with the Alabama Surface Mining Commission's Technical Manual No. 1, "Approved Statistical Analysis and Sampling Techniques for Determining Revegetation Success on Surface Mine Lands in Alabama", or by other methods which have approval from the Alabama Surface Mining Commission.
